

BRENTWOOD ROAD, N.E. TRANSPORTATION STUDY

JUNE 2004 UPDATE

The *Brentwood Road Transportation Study* is approaching its completion. A comprehensive traffic data collection task and subsequent analysis have been completed. The Study Team is currently developing recommendations for the improvement of the area transportation system, based on three primary factors:

- Traffic analysis
- Walk-throughs of the area and inventories of the transportation system condition
- Stakeholders' inputs

DDOT reopened the 9th Street Bridge to traffic on May 21. During the closure, DDOT repaved Brentwood Road and installed new markings, some of which are recommended in the Study.

Additional recommendations include:

- New curbs, sidewalks and pedestrian facilities
- Refurbishing worn-out signs and markings
- Corrective measures at the intersection Giant Shopping Center Ramp and Brentwood Road
- Improvement of traffic circulation in the area
- Enforcement of vehicle speed and weight restrictions in the area

The Study Team will present the findings and recommendations in a public meeting in **early July** and will receive citizens' comments on the recommendations. The comments will be incorporated in the Final Report.

STUDY AREA

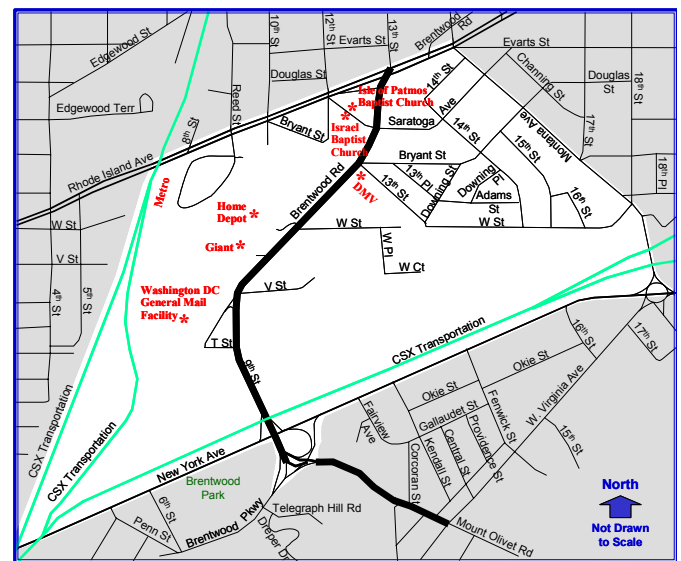

Boundaries of the study area are as follows (see map below):

North: Rhode Island Avenue

East: Montana Avenue

West: Railroad right of way

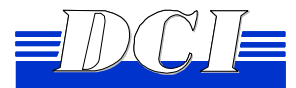

South: New York Avenue (including the 9th Street Bridge and connections with Mount Olivet Road)
